

Human evaluation. Training data. Model quality.

U.S.-managed AI operations with scalable African talent, structured QA, and measurable delivery for AI labs, model teams, and technology organizations.

PROVE QUALITY BEFORE YOU COMMIT

Start with a **no-cost pilot evaluation**: a small, clearly scoped sample designed to demonstrate quality, consistency, turnaround time, and QA before a broader engagement.

CORE CAPABILITIES

- LLM response evaluation and ranking
- Human preference data / RLHF support
- Prompt-response creation and validation
- Factuality, hallucination and reasoning evaluation
- Coding, SQL and STEM evaluation
- AI-agent trajectory and task evaluation
- Search and relevance evaluation
- Dataset cleaning, deduplication and QA
- Synthetic-data validation
- Human-in-the-loop review and escalation

MULTILINGUAL & CULTURAL EVALUATION

Initial focus can include English, Nigerian English, Nigerian Pidgin, Igbo, Yoruba and Hausa, with expansion into additional African-language and cultural evaluation programs as required.

DELIVERY MODEL

U.S.-based contracting & technical oversight

Datastruma manages client engagement, technical scoping, governance and delivery accountability.

Managed workforce

Qualified delivery talent in Nigeria supports scalable evaluation and data operations. Datastruma manages recruiting, qualification, calibration, reviewer QA and performance measurement.

Quality controls

Task guidelines, gold-standard examples, reviewer layers, sampling, disagreement analysis, measurable acceptance criteria and continuous calibration.

ENGAGEMENT OPTIONS

Pilot evaluation • Fixed-scope project • Dedicated evaluation pod • Ongoing managed operations • Specialized domain-expert evaluation

WHY DATASTRUMA	NO-COST PILOT	BUILT TO SCALE
Founder-led technical oversight, enterprise data engineering experience, AI/cloud capability, and a delivery model designed around measurable outcomes rather than commodity staffing.	A defined sample - typically up to 50-100 evaluation items depending on task complexity - with agreed rubric and acceptance criteria. No obligation to continue.	Start small, calibrate quickly, then expand into a managed evaluation or data-operations program when quality and workflow are proven.

TECHNOLOGY & OPERATING FOUNDATION

Cloud and data engineering • Python / SQL / Java / Scala • Spark and distributed data platforms • AWS / Google Cloud / Azure • AI-enabled applications and automation • API and workflow integration • structured QA and delivery reporting
